

CPE 372/641 Natural Language Processing

Homework 5: Summary & reflection homework

Due May 8, 2020 via Piazza

1. Summary: Topic from translation model is the given source sentences and a foreign sentence is to assign a probability that source sentences(source) generates foreign sentence(target). Each of source sentence can be generate to many foreign sentence(target) by given probability and we can use Phrase-Based (sequences of words) such as Subject + Verb + Object to compute if the word is individual and phrase – base relies on a translation probability and a distortion probability
2. how your studying life has changed after Covid-19 and what adjustments you need to make, what you have to struggle with, for this course and other courses

First at all I have to go back home when have online study by I have rent the dormitory So I have to spend cash for each month because this dormitory is not a partner with KMUTT. I'm more active with my routine when is Friday this day my class are in the morning(SSC subject) and in the afternoon is (NLP subject) so when I have morning class but sleepless I will record the video of the class and then study after that. Sometimes NLP are on record too
